IfOnli — Website Master Specification

Oct 30, 2026 · @Amish Yadav

About this document

This is the single source of truth for the IfOnli website: everything the site must do, look like and decide before build. It merges the original requirements doc (v1.0, 27 Oct 2026) with the ideas added since (IDEA-01 hero animation, IDEA-02 vibe theme switcher). It is the input for the implementation plan.

Status labels used throughout

Label	Meaning
Must	Required for first release unless an exception is approved in writing
Should	Important, may be deferred by agreement and documented
Could / Later	Optional, future release
Decide	Business decision still open; listed in the last section
New	Added after the requirements doc v1.0; not in the original scope
Suggestion	A proposed answer, not yet confirmed by the business owner

Rule: values marked Decide must come from the business owner. The developer does not invent prices, fees, policies or timelines.

1. Project overview

IfOnli is an India-focused online store for expressive charms and accessories, priced in INR. The site's job: help customers discover products by mood, understand price and delivery, pay securely and get order updates. The business team manages products, stock, orders, discounts and queries.

Item	Value
Brand	IfOnli
Products	Charms, Hippers, 3D stickers, DIY / mix-and-match accessories
Market	India, INR (serviceable locations: Decide)
Platform	Decide: Shopify, WooCommerce or custom build
Positioning	Playful, mood-led accessories brand; shoppers pick a "vibe"

Objectives

1. A visually distinctive, mobile-friendly storefront.
2. Products organised by mood collection: Cute, Bold, Overthinking, Gothic, Funky.
3. A full buying journey: browse, search, cart, checkout, payment, confirmation.
4. Admin tools for catalogue, inventory, orders and promotions.
5. Shipping, cancellation, return/refund and privacy policies easy to find.
6. A signature brand experience: a theme switcher that re-skins the site per vibe, and an animated hero (New).
7. Room to grow into reviews, bundles, loyalty and advanced analytics later.

2. User roles

Four roles; two are optional and depend on decisions about accounts and fulfilment staff.

Role	Needs and permissions	Status
Guest customer	Browse, search, view products, switch vibe theme, use cart, check out if guest checkout is on	Must
Registered customer	Login, profile, saved addresses, order history, wishlist	Decide
Store administrator	Manage products, collections, stock, orders, discounts, site content, policies; view reports and engagement insights	Must
Support / fulfilment	View relevant orders, update fulfilment status; no catalogue, pricing or settings access	Should

Admin engagement insights (from the requirements doc): the admin should see the most viewed products and the "most scrolled" products. "Most scrolled" needs a definition before build. Suggestion: count how often a product is seen in a listing (impressions) and how far shoppers scroll on its product page.

3. Scope

The first release is a complete single-brand store plus two signature experiences; marketplace, apps and international selling are out.

In the first release (MVP)

- Responsive pages: home, collections, product detail, search, cart, checkout, order confirmation, contact/FAQ, policies.
- Product catalogue with images, descriptions, prices, product codes and stock status.
- Cart with quantity changes, removal, subtotal, shipping/tax/discount display and total.
- Checkout with contact details, delivery address, shipping option and payment method.
- Payment gateway handling for successful, pending and failed payments.
- Order creation, status management, customer notifications, admin order view.
- Inventory management that blocks buying beyond available stock.
- Admin access, basic reporting, SEO essentials, agreed analytics.
- **New:** vibe theme switcher (hand button) — see section 6.
- **New:** animated landing-page hero with product tiles — see section 6.

Excluded unless approved separately

- Native iOS or Android app; third-party seller marketplace.
- Complex product personalisation or a live 3D product builder.
- Loyalty points, subscriptions, advanced recommendations, referral programme.
- International shipping, multi-currency checkout, custom ERP or warehouse system.

Unresolved scope items

- DIY / custom bundles: the brand sells DIY accessories, but whether customers can assemble custom combinations in v1 is undecided. This changes the product model, cart and stock logic, so it is the first decision to settle.
- Wishlist: listed as Must on the product page but depends on accounts (Decide).

Any work outside the agreed scope needs a written estimate and approval (section 13).

4. Catalogue model

The catalogue has two independent dimensions: **vibe** (mood) and **product type**. The requirements doc lists all eight as one collection list; they must be modelled separately so a product can be, say, a Gothic Hipper.

Dimension	Values	Drives
Vibe (mood collection)	Cute, Bold, Overthinking, Gothic, Funky	Theme switcher, featured products, collection pages
Product type	Charms, Hippers, 3D Stickers, DIY Accessories	Main navigation and filters inside every theme

Product record (minimum fields)

- Name, product code (SKU), price (INR), compare-at price (optional)
- Description, images (consistent ratio), image alt text
- Vibe tag(s), product type
- Variants, if any (attributes still to define: colour, size, pack count?)
- Stock quantity, low-stock threshold, active / inactive flag
- SEO title, meta description, URL slug
- Transparent-background cutout image for hero and theme tiles (New)

Open points

- Can one product carry several vibes? (Decide)
- What can vary per product (variants)? (Decide)
- "Hippers" needs a one-line definition for product copy and navigation.

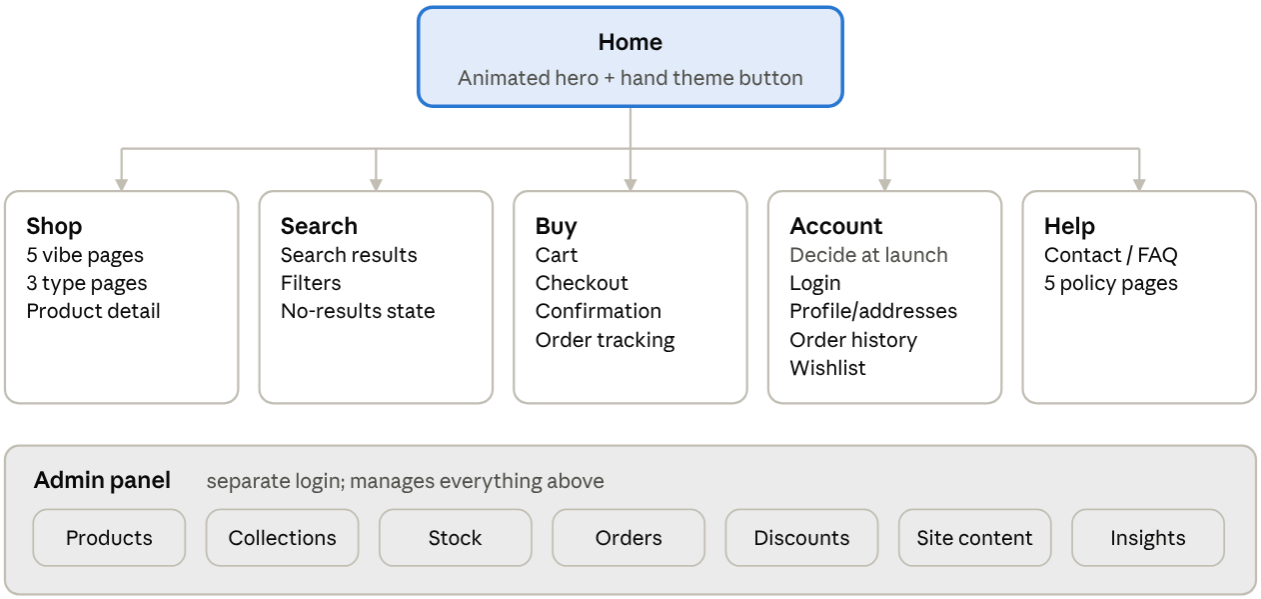

5. Pages

Eleven storefront pages plus the admin panel; the theme switcher and hero animation sit on top of these pages, not as separate pages.

Page	What it must contain	Priority
Home	Logo, hand theme button, navigation, animated hero, vibe collection links, featured/new products for the active vibe, offers, footer	Must

Page	What it must contain	Priority
Collections / Shop	One page per vibe (Cute, Bold, Overthinking, Gothic, Funky) and per type (Hippers, 3D Stickers, DIY Accessories)	Must
Product detail	Images, name, price, description, variants if any, stock status, quantity, Add to Cart, Wishlist	Must (Wishlist: Decide)
Search / filters	Relevant results; filter by vibe, type, price, availability; helpful no-results state	Should
Cart	Items, quantity edit, remove, subtotal, shipping, tax, discount, total	Must
Checkout	Contact details, delivery address, shipping option, payment; final payable amount shown	Must
Order confirmation	Order reference, item summary, amount, payment/order status	Must
Order tracking	Fulfilment status, tracking link/number when available	Should
Contact / FAQ	Support contact; answers on delivery, payment and product issues	Must
Policies	Shipping, cancellation, return/refund, privacy, terms	Must
Customer account	Login, profile, addresses, order history	Decide
Admin panel	Products, collections, stock, orders, discounts, site content (banners, featured items), reports, engagement insights	Must

Every storefront page hangs off Home; admin sits behind its own login

sitemap · 5 page groups + admin

The vibe theme applies to every storefront page; Buy pages take its colours only, and admin is never themed.

6. Signature experiences (New)

Two features set IfOnli apart: a hand button that cycles the whole site through five vibe themes, and an animated product-tile hero. Neither is in the requirements doc v1.0; both are added scope.

6.1 Vibe theme switcher

Decided: a hand-shaped button. Each click moves to the next theme in a fixed order and wraps around after the last. No picker menu. Desktop position: top-left.

What a theme changes

- Colour palette, background texture, display font, button and card shapes, icon style
- Copy tone (headlines, empty states, button microcopy)
- Hero animation variant (6.2)
- Featured products on the home page and featured sections: the active vibe's collection
- Optional: custom cursor

What a theme does not change (Suggestion)

- Search, collection pages, cart and checkout always show all products; the theme features, it does not hide.
- Checkout keeps one layout in every theme; only colours change, so trust and clarity hold.

Starter look per theme (Suggestion, needs brand input)

Theme	Direction
Cute	Pastels, rounded corners, bubbly type, soft shadows, sparkles
Bold	High contrast, saturated primaries, heavy grotesk type, hard edges
Overthinking	Notebook paper, scribbles, crossed-out text, thought bubbles, muted blue/grey
Gothic	Black, deep red/purple, blackletter or sharp serif, candle and lace textures
Funky	Clashing brights, retro 70s waves, warped type

Button behaviour (Suggestion)

- Shows the current theme name; hover/long-press shows "Next: <theme>".
- Each click plays a short hand flick and a theme cross-fade, under 400 ms.
- Real `<button>`; aria-label like "Change vibe, current: Cute, next: Bold"; the new theme is announced to screen readers; works by keyboard.
- Under reduced-motion settings the theme swaps instantly with no animation.
- The choice is remembered on return visits and reflected in the URL (e.g. `?vibe=gothic`) so it can be shared.
- Load only the active theme's font and preload the next one in the cycle.
- Reaching a specific vibe can take up to 4 clicks; the collection pages in the menu stay the direct route.

Open: cycle order; default theme on first visit; whether a neutral "IfOnli" theme is part of the cycle; mobile placement (top-left usually holds the menu or logo).

6.2 Animated hero (product tiles)

Proposed (to finalise): the landing-page hero follows the reference video (29 s, square), with IfOnli products replacing the calligraphy characters.

Reference sequence, scene by scene

1. One tile on a canvas styled like a design tool: paper texture, grid, anchor points, selection handles.
2. The tile splits into a pair joined by connector lines; the frame morphs square to rounded square to circle.
3. Many small tiles fan out on spokes from a centre, with 2–3 large highlighted hero tiles.
4. Dark transition: tiles rotate in 3D with shadow streaks; one tile echoes horizontally.
5. Dense collage of tiles zooms to fill the screen, then cuts to a solid colour with one badge.
6. Tiles scatter, then swirl into spiral and ring clusters.
7. Tiles snap into a cross, a checkerboard, then a strip, with connector lines and anchor dots.
8. Brush-stroke fragments burst radially on a dark background.
9. Full-screen grid of tiles with a highlight wave moving through it.
10. Tiles flip like book pages, then loop back to the opening tile.

Translation to IfOnli

- Each tile = a product cutout on a coloured square or circle backing.
- Pairs, clusters and mosaic scenes show collections and the mix-and-match idea.
- Scene 8 (brush strokes) has no product equivalent: drop it or burst product silhouettes.
- Colours follow the active vibe theme, not the reference's red/blue/black; one variant per theme (5x the animation work).

Constraints

- Target 8–12 s loop or scroll-driven scenes; 29 s is longer than most visitors stay on a hero.
- The Shop / collection button stays visible throughout.
- Poster frame first, animation lazy-loaded; must not slow mobile load.
- Static fallback under reduced-motion settings; no hard cuts that flash.
- Needs consistent transparent-background product cutouts for every product used.

Open: build approach — (a) pre-rendered video loop: lightest to build, not clickable; (b) coded animation (e.g. GSAP or canvas): pulls live products, tiles can link to product pages, heaviest to build; (c) a hybrid. Also: are tiles clickable?

7. Functional requirements

Eighteen requirements come from the requirements doc; FR-19 to FR-27 are added to cover the new features and gaps found in review. Each must pass its acceptance criterion.

ID	Feature	Acceptance criterion	Priority
FR-01	Catalogue	Each active product shows correct name, image, price and availability	Must
FR-02	Product detail	Customer sees images, description, price, variants and stock status	Must
FR-03	Collections	Selecting a vibe or product-type collection shows the products assigned to it	Must
FR-04	Search	Relevant results, with a helpful no-results state	Should
FR-05	Cart	Adding, changing quantity or removing updates cart and subtotal correctly	Must
FR-06	Stock	Checkout revalidates stock and blocks purchase beyond available quantity	Must
FR-07	Price calculation	Discounts, shipping, taxes and total are calculated transparently	Must
FR-08	Checkout validation	Required fields validated with understandable error messages	Must
FR-09	Payment	Status verified through the gateway's supported process; failures never marked paid	Must
FR-10	Order creation	Unique order reference generated and visible in admin	Must
FR-11	Notifications	Order confirmation and agreed payment/shipping updates are sent	Must
FR-12	Order status	Admin can update or sync fulfilment status	Must
FR-13	Inventory admin	Authorised admin edits stock and sees low/out-of-stock products	Must
FR-14	Discounts	Coupons follow configured dates, eligibility and minimum basket rules	Should
FR-15	Policy visibility	Policies reachable from the footer and before purchase	Must

ID	Feature	Acceptance criterion	Priority
FR-16	Responsive design	Shopping and checkout work on agreed mobile, tablet and desktop sizes	Must
FR-17	Admin access	Only authorised users reach protected admin functions	Must
FR-18	Analytics	Agreed events measure visits, product views, cart, checkout, purchases without exposing payment secrets	Should
FR-19	Vibe theme switcher (New)	Each click on the hand button applies the next theme site-wide in under 400 ms; the choice persists across pages and visits	Must if adopted
FR-20	Themed product display (New)	Home and featured sections show the active vibe's products; search, collections, cart and checkout still show all	Must if adopted
FR-21	Animated hero (New)	Hero plays the agreed loop, shows a static frame under reduced motion, and keeps the Shop button visible	Should
FR-22	Filters	Filter by vibe, product type, price and availability; results update correctly	Should
FR-23	Order tracking	Customer sees fulfilment status and tracking link/number when available	Should
FR-24	Site content admin	Admin edits banners, featured products and FAQ without code	Must
FR-25	Cancellations and refunds admin	Admin records a cancellation or refund and the order status and customer notification follow	Must
FR-26	Engagement insights	Admin sees most viewed and most scrolled products for a chosen date range	Should
FR-27	Wishlist	Customer saves and removes products; behaviour without an account to be decided	Decide

FR-22 to FR-27 cover pages and admin features that the requirements doc lists but gives no requirement for.

8. Business rules

Twelve rules must be set by the business owner before launch; none has a value yet. The developer builds them as configurable settings, not hard-coded values.

Topic	What must be decided
Market / currency	India and INR assumed; which pin codes / regions are serviceable
Pricing / tax	Whether prices include GST; how tax is calculated and shown
Shipping	Fees, free-shipping threshold, delivery locations
Delivery estimates	Processing time, delivery ranges, how delays are communicated
Inventory	Stock reservation at checkout, reservation expiry, backorders yes/no, low-stock threshold
Cancellation	When a customer can cancel and which order statuses allow it
Returns / refunds	Process for damaged, defective, wrong or missing items; refund method and timing
Payment methods	Gateway; UPI, cards, net banking, COD
Discounts	Coupon expiry, eligibility, minimum value, exclusions, stacking
DIY / bundles	Whether customers assemble custom combinations in v1
Accounts	Guest checkout on/off; login optional or required
Support	Official email/phone and expected response time

Legal note (from the requirements doc): a no-return policy must be shown clearly before checkout and reviewed legally. Consumer-protection rights for defective, damaged, misdescribed or wrongly supplied goods may still apply.

9. UI/UX and design system

The site should feel playful but buy like a serious store: discovery is expressive, checkout is plain and clear.

From the requirements doc

- Use the approved IfOnli logo, colours, typography and visual assets.
- Mobile-first; Add to Cart and Checkout always easy to find.
- Consistent product image ratios, readable type, accessible colour contrast.
- Loading, empty, error, success and no-results states wherever relevant.
- Shipping, discounts, taxes and final payable amount shown before order submission.
- Sitemap, wireframes or design previews approved before full build.
- Business owner supplies reference sites, mockups, logo files, product photography, brand assets.

Added for the theme system (New)

- One design-token set (colours, fonts, radii, shadows, textures) per vibe, plus a base set shared by all; components read tokens, never fixed colours.
- Every page designed once and checked in all five themes.
- Each theme palette passes WCAG AA contrast; Gothic and Funky need the closest checking.
- Product photography: standard shots plus transparent-background cutouts, same angle, lighting and resolution, for hero and theme tiles.
- Motion: short and purposeful; every animation has a reduced-motion version.

10. Technical, security and non-functional requirements

The platform choice is the biggest open technical decision: it decides how much of sections 5–7 is configured versus built.

Area	Minimum expectation
Platform	Recommend Shopify, WooCommerce or custom with costs and trade-offs before approval. The theme switcher and coded hero are easiest on a custom build; possible on Shopify with theme sections, JS and metafields, with more limits

Area	Minimum expectation
Performance	Optimised images and scripts; measurable targets agreed after platform choice. Hero lazy-loaded behind a poster frame; only the active theme's fonts loaded
Availability / recovery	Document availability assumptions, backups, recovery steps, responsibilities
Security	HTTPS, secure admin login, least-privilege roles, timely updates, secure credential handling
Payments	Reputable gateway; no raw card details stored on the site
Privacy	Collect only necessary data; privacy notice; access, retention and deletion procedures. Theme choice stored without personal data
Accessibility	Semantic headings, labelled forms, keyboard-accessible controls (including the hand button), contrast, alt text, reduced-motion support
SEO	Editable titles and meta descriptions, clean product URLs, alt text, sitemap, indexing controls; theme URL parameter must not create duplicate indexed pages
Compatibility	Current major browsers; agreed phone, tablet, desktop sizes
Maintainability	Document configuration, integrations, deployment and update process, known limitations

The developer flags relevant legal, tax, privacy, consumer-protection and payment-provider obligations for India; the business owner takes professional advice where needed.

11. Integrations

All six integrations are still to confirm; the payment gateway is the one that blocks build.

Integration	Requirement	Status
Payment gateway	Provider, methods (UPI, cards, net banking, COD), success/failure handling, refund process	To confirm
Shipping / courier	Manual fulfilment or courier integration; tracking number and status flow	To confirm
Notifications	Email / SMS / WhatsApp; which events; provider	To confirm
Analytics	Tool, events (incl. theme switches and hero engagement), consent settings	To confirm
Domain / hosting	Owner, plan, renewal costs, admin access	To confirm
Animation tooling (New)	Video loop vs coded animation library (e.g. GSAP) for the hero	To confirm

12. Acceptance testing

Sign-off requires every check below to pass and no open critical or high-severity defect, unless accepted in writing.

From the requirements doc

- [ ] Customer browses a collection and opens a product detail page
- [ ] Cart item, quantity, price and subtotal are correct; changes and removals recalculate totals
- [ ] Out-of-stock items cannot be bought; concurrent purchases follow agreed stock rules
- [ ] Invalid or expired coupons are rejected with a clear message
- [ ] Checkout validates required fields and shows the full payable amount
- [ ] Successful payment creates/updates an order with a verifiable status
- [ ] Failed, cancelled, pending or duplicate payments never mark an order paid or charge twice
- [ ] Confirmation and notifications show the correct reference and summary
- [ ] Admin edits a product, updates stock, views orders, updates fulfilment status
- [ ] Policy links work before purchase; full journey works on agreed mobile and desktop browsers
- [ ] Unauthorised users cannot reach admin functions

Added for new features

- [ ] Hand button cycles through all themes in order and wraps; works by mouse, touch and keyboard
- [ ] Theme choice persists across pages and return visits; shared theme URL opens in that theme
- [ ] Switching theme never removes products from search, collections, cart or checkout
- [ ] Every theme passes contrast checks on home, product, cart and checkout
- [ ] Hero shows a static frame under reduced motion; Shop button stays visible; mobile load meets agreed target
- [ ] Admin cancels/refunds an order and the status and customer notification update

13. Delivery, timeline and change control

Six phases run in order; none has a date or budget yet.

Phases

1. Discovery — confirm requirements, platform, scope, assumptions; close the open decisions in section 14.
2. Design approval — sitemap, wireframes, visual design for all five themes, hero storyboard.
3. Build / configuration — approved pages, features, theme system, hero.
4. Testing — functional, responsive, theme, payment and security checks; fixes.
5. Launch — production deployment, final checks, admin handover.
6. Post-launch support — agreed defect warranty; optional maintenance.

Deliverables

- Approved sitemap, wireframes/designs and page list
- Working website implementing the agreed first-release requirements
- Configured and tested integrations
- Admin training or recorded walkthrough
- Business-controlled access to domain, platform, hosting, analytics, payment and shipping accounts
- Source code / repository access for custom work, with third-party licence details
- Configuration, deployment, backup/recovery and maintenance documentation
- Test report, known-issues list, written sign-off
- Written post-launch warranty period and separate maintenance quote

Commercials to record: total fee, payment milestones, taxes, recurring third-party costs, change-request rates, ownership and licensing, warranty length, support response times, termination and handover terms.

Change control: any change to scope, behaviour, timeline or cost goes in a change request stating reason, impact, extra cost and schedule effect; the business owner approves in writing before work starts.

14. Open decisions

26 decisions remain open; the first five block the implementation plan, the rest block specific features. Rows are in the order they should be settled.

#	Decision	Blocks	Status
1	Platform: Shopify, WooCommerce or custom build	Everything	Open
2	DIY / custom bundles in v1?	Product model, cart, stock	Open
3	Payment gateway and methods, incl. COD	Checkout, FR-09	Open
4	Guest checkout; are accounts needed at launch?	Checkout, wishlist, order history	Open
5	Budget and target launch date	Timeline, scope cuts	Open
6	GST-inclusive pricing and tax display	FR-07	Open
7	Shipping fees, free-shipping threshold, serviceable locations	Checkout, FR-07	Open
8	Cancellation, return/refund, damaged-item policies	Policies, FR-25	Open
9	Stock reservation, expiry, backorders, low-stock threshold	FR-06, FR-13	Open
10	Coupon rules (expiry, eligibility, minimum, stacking)	FR-14	Open
11	What can vary per product (variants)	Product model	Open
12	Can a product carry several vibes?	Catalogue, FR-20	Open
13	Theme cycle order	FR-19	Open

#	Decision	Blocks	Status
14	Default theme on first visit; is a neutral theme in the cycle?	FR-19, home	Open
15	Theme only features its vibe vs hides other products	FR-20	Open
16	Hand button placement on mobile	Header design	Open
17	Hero build: video loop, coded or hybrid	FR-21, budget	Open
18	Hero length; are tiles clickable?	FR-21	Open
19	Definition of "most scrolled" product	FR-26	Open
20	Wishlist behaviour without an account	FR-27	Open
21	Notification channels (email/SMS/WhatsApp) and events	FR-11	Open
22	Courier: manual fulfilment or integrated	FR-23	Open
23	Analytics tool and events	FR-18	Open
24	Who supplies photos, cutouts, copy, prices, stock counts, brand assets	Design, hero, content	Open
25	Who owns domain, platform, code and service accounts	Handover	Open
26	Support email/phone and response time	Contact page	Open

Contradictions in the requirements doc v1.0

- The cart (Must) shows discounts, but coupons (FR-14) are only Should. Either raise FR-14 to Must or hide the discount line until coupons ship.
- Wishlist is Must on the product page while accounts are Decide (decisions 4 and 20).
- "Most viewed / most scrolled" sits in the roles table with no requirement; now FR-26 (Should).
- The hero reference uses red/blue/black; final colours must come from IfOnli brand assets per theme.
